

Hi everyone in team 8,

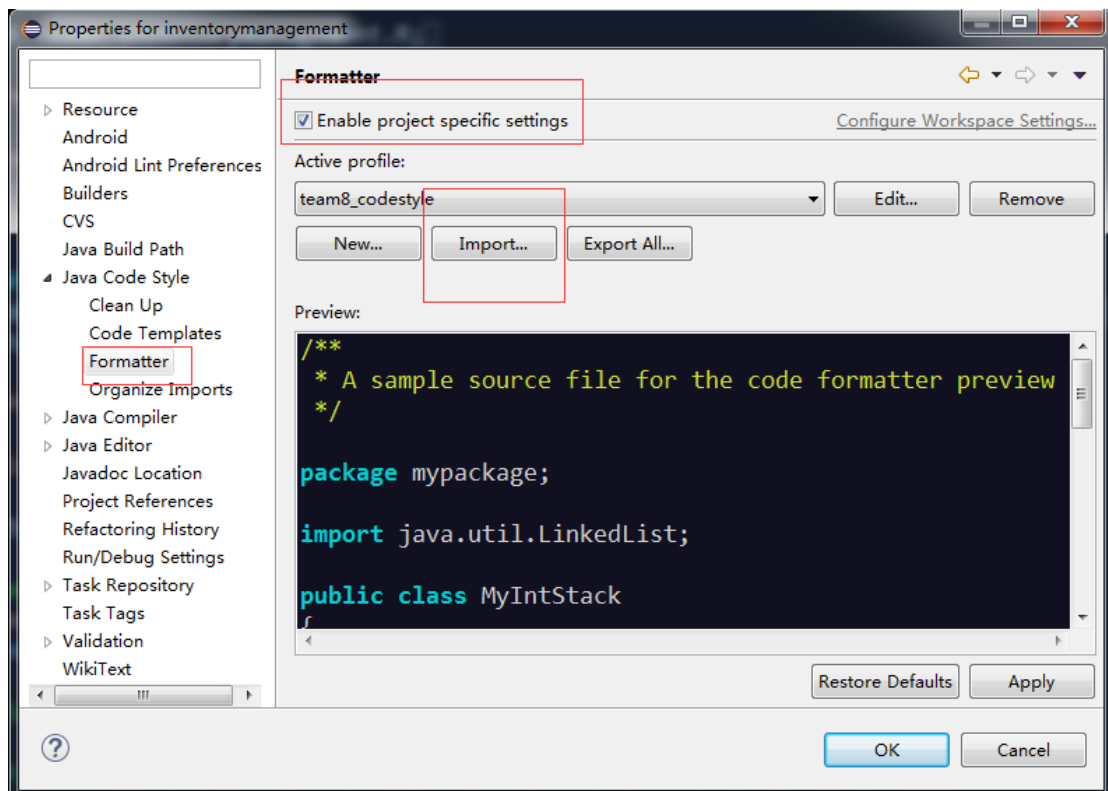

I created a configuration file to help format code automatically. I hope it will help everyone.  
The configuration file named **team8\_code\_style.xml** in the documentation folder.

The following step is used to show how to use it:

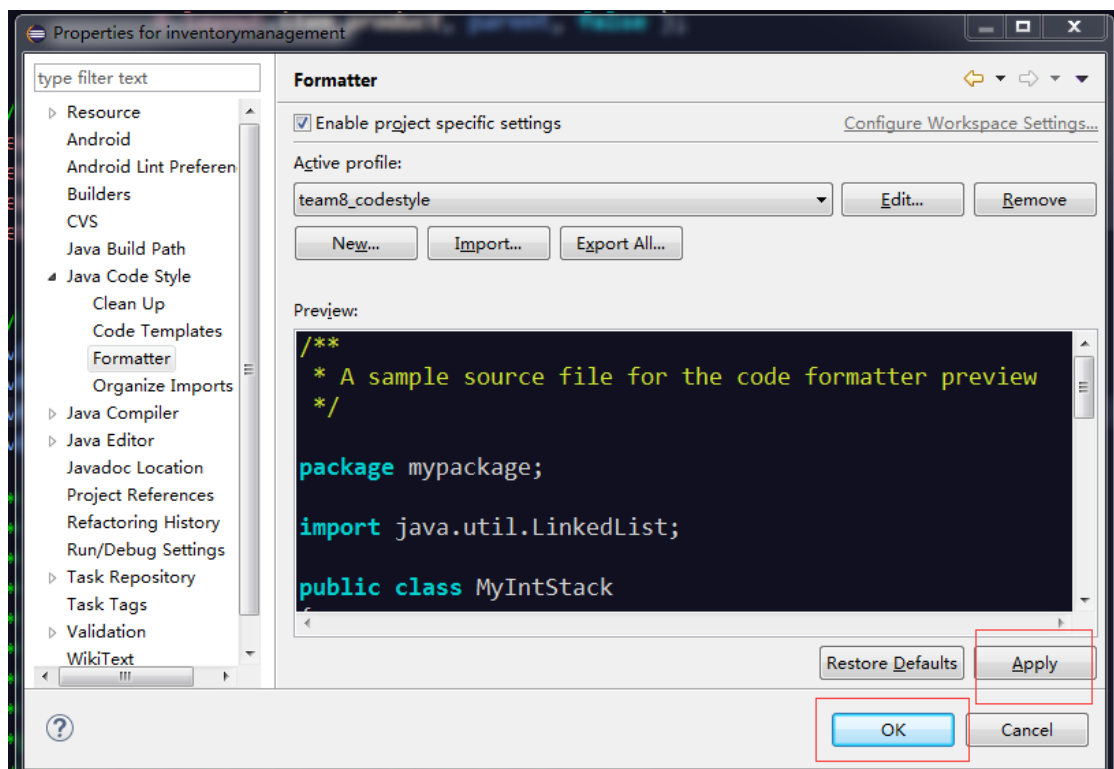

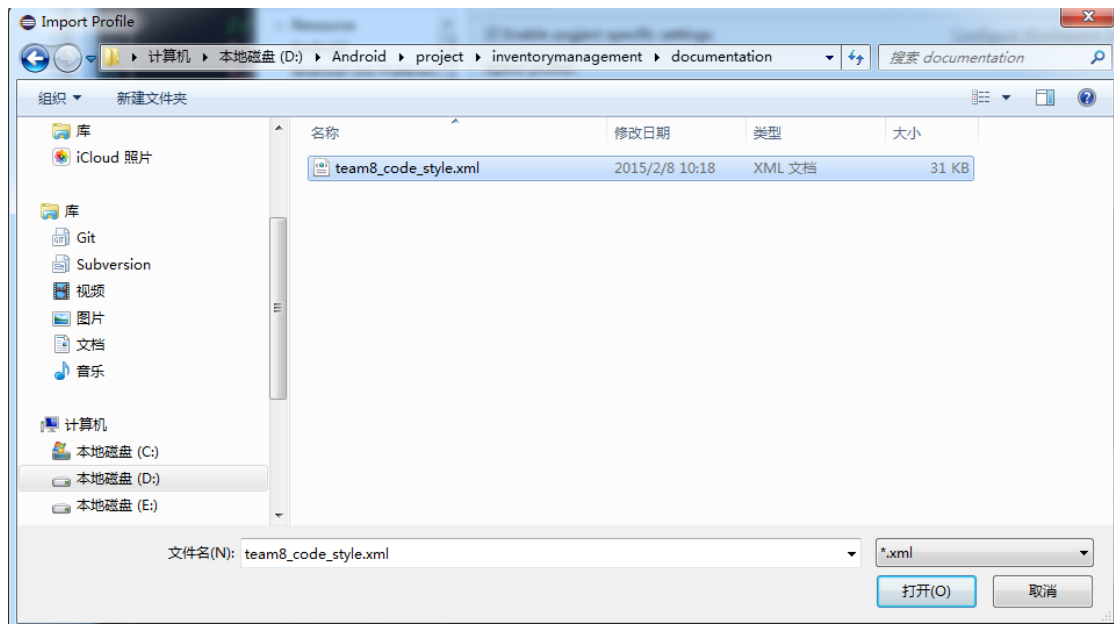

1. Go to the menu **Project -> properties**

2. Choose the **Java Code Style -> Formatter -> import**, enable project specific setting

3. Select the configuration file, and click Apply -> Ok

4. Restart the eclipse
5. Now, we can use the functionality of code formatting. For any code file,  
use **ctrl shift + f** to format the code to standard style.

I hope it is helpful.
